

GENML801 Machine Learning

Student Name	GILBERT IRABISHOBOYE
Registration Number	26RP00139
Date	29 September 2026

Online Deployment and Prediction

The house price prediction application was deployed using Streamlit Community Cloud and connected to the project's GitHub repository. The deployed application provides a web-based interface where users can enter house information and obtain an estimated house price from the trained machine learning model.

The screenshot below shows the deployed application running online and successfully generating a house price prediction.

Live Application:

<https://house-price-predictor-fmjfyndlgtapw6eckyqm5r.streamlit.app/>

Local Application Testing

Before deployment, the Streamlit application was tested locally to verify that the user interface, model, input fields, and prediction process were functioning correctly. The screenshot below shows the application running locally and producing a house price prediction.

Local application address:

<http://localhost:8501>
